Work Experience

Stripe, Senior Software Engineer, San Francisco, *Nov 2018 – Nov 2022*

- Worked on [Connect](#), Stripe's platform for multi-party payments and merchant onboarding, focused on authentication and onboarding infrastructure.
- Consolidated three fragmented onboarding APIs into a single unified integration for Stripe Connect, simplifying how platforms onboard merchants. Authored technical specs, drove complex API reviews to consensus across teams, and shipped to GA. Now the default onboarding integration for all new Connect platforms.
- Owned authentication, session management, and security for Express App (Stripe's mobile dashboard for connected accounts) across 4 workstreams with 6 engineers. Shipped multi-merchant sessions, standalone login, and mobile OAuth; enabled 100K+ Custom accounts to access Express App for platforms like DoorDash. Extended onboarding to 20+ additional countries and grew local payment method activation from under 1,000 to over 100,000 merchants.
- Drove security reviews to de-risk launches across Connect product surfaces. Designed and shipped an identity verification intervention, reducing bank-account-related support volume by over 50%. Featured by Patrick Collison at company all-hands.
- Mentored engineers across levels: onboarded staff engineers onto security-critical infrastructure, and guided an intern to a full-time return offer.

Sesame HQ, Co-founder/CTO, Toronto/Waterloo, *Aug 2014 – Nov 2018*

- Funded by Imagine K12/Y Combinator (Fall 2015). Raised angel funding to build an edtech platform helping teachers assess student competencies and build digital portfolios.
- Designed and built the full product stack from scratch: native iOS app, front-end web app, and backend microservice architecture. Adopted by thousands of teachers across paying schools.
- Managed and mentored an engineering team of 3; oversaw product engineering, design, and technical hiring.

Twitter, Software Engineer (Intern), San Francisco/Boston, *Jan - April 2013, Sept - Dec 2013*

- Shipped [Twitter Headlines](#), contributing to the lambda infrastructure implementation using [Summingbird](#).
- Mentioned in [VLDP paper](#) for contributions to generic Count-Min Sketch implementation in [Algebird](#).

Square, iOS Engineer (Intern), San Francisco, *May - Aug 2012*

- Open sourced [PonyDebugger](#), a remote debugging toolset for iOS apps. ([blog post](#))

Projects

Refeed (refeed.co), 2025 - present

- Built an iOS app that transforms your everyday food photos into structured, [shareable guides](#).

Mixbox (mixbox.io), 2013 - 2014

- Built an iPad app that lets you make remixes and mashups of songs using pitch detection/beat matching algorithms in an intuitive and fun to use drag-and-drop interface.
- Won [\\$10k Capstone Design competition](#).

Mantaphrase (mantaphrase.com), 2012

- Built an iOS app to help travellers communicate in a foreign language, featured on [TechCrunch](#).

Education

Bachelor of Software Engineering, Co-op Program, **University of Waterloo**, 2014
